

Business Layer:

Board:

- Add getter for column by ordinal.
- Add getter for email address.
- Add getter for board name.
- Add getter for column name by ordinal.
- Add getter for limit.
- Add setter for a specific column.
- Add function to set limit for all columns in the board.
- Add function to return a list of all tasks in the "in progress" column.

BoardFacade:

- Ensure all functions in this class validate the data.
- Function to add a board to the system.
- Function to remove a board from the system.
- Function to check and return the column name.
- Function to validate data and change the column limit.
- Function to check and return the column limit.
- Function to validate data and return a list of all tasks in the "in progress" column.
- Function to validate data and return a column by ordinal.
- Function to add a task to the board.
- Function to validate data and move a task from one column to another.
- Function to change the task title.
- Function to validate data and change the task description.
- Function to change the task date.
- Function to check if the title is legal.
- Function to check if the description is legal.
- Function to check if the date is legal.
- Function to check if the user status (logged in/logged out) is legal.
- Function to check if the status (ordinal of the column) is legal.

Column:

- Add getter for the column limit.
- Add getter for the column name.
- Add function to add a task to the list of tasks.
- Add function to change the task limit in the column.
- Add function to return the current number of tasks in the column.

Task:

- Add getter for task ID.
- Add getter for creation time.
- Add getter for due date.
- Add getter for task title.
- Add getter for description.
- Add getter for column ordinal.

- Add getter for email.
- Add function to change the email.
- Add function to change the due date.
- Add function to change the title.
- Add function to change the description.
- Add function to change the column ordinal.

User:

- Add getter for email.
- Add getter for password.
- Add getter for ID.
- Add function to check if the user is logged in.
- Add function to log in.
- Add function to log out.

UserFacade:

- Function to check if the user can sign into the system.
- Function to check if the user can log in if the data is correct.
- Function to check the log out.
- Function to check if the password is legal.

Service Layer:

UserService:

- Add a private `UserFacade` to help validate the data.

BoardService:

- Add a private `BoardFacade` to help validate the data.
